

ADDENDUM TO INSTRUCTIONS WHEN AUXILIARY LIGHT BRACKETS ARE FITTED TO 2022 K1600 MODELS

When fitted to 2022 models the speaker covers are held on with four, not two screws. To remove these the TFT screen needs to be removed as below. This also identifies the position of the extra screws to remove the panel.

To remove the TFT screen simply open the phone compartment (after raising the screen to allow access). Remove the Torx 25 screws marked **2** and **3** (left). Carefully grip the screen in the centre and tilt away from the phone compartment at the top. The screen should lift away and expose two connectors. The larger one requires thumb pressure on the catches to release and the smaller one simply pulls out.

The screws marked **1** and **4** (left) are the top speaker retaining screws for the LH and RH speaker covers respectively and will need to be removed.

Once the TFT screen is removed as above, there will be two further fasteners for each side's speaker panels marked **1 - 2** (LH) and **3 - 4** (RH). (Shown Left).

The speaker covers should now unclip and be removed.

All other instructions are as earlier models.
